Project ideas

1. The project idea to start with is to do a child mortality for children under the age of 5. Compare different countries and diseases. We also have an idea to show developed vs developing countries differences.

Dataset Location: <http://apps.who.int/gho/data/view.main.ghe1002015-CH6?lang=en>

2. Our second idea is to do a drug poisoning mortality by country and combine that with gdp by county to see if gdp makes a difference on drug poisoning.

Dataset Locations: <https://data.cdc.gov/NCHS/NCHS-Drug-Poisoning-Mortality-by-County-United-Sta/pbkm-d27e>

<https://apps.bea.gov/iTable/iTable.cfm?reqid=70&step=1&isuri=1>

3. Our third idea is to combine air pollution, gdp, and asthma to see if air pollution causes more asthma and places with more gdp how does that effect everything.

Dataset Locations: https://www.cdc.gov/asthma/most_recent_data_states.htm#source
